# MINITENSOR - Multiposition therapy device

**Product short description:**

**Mini Tensor** allow to perform multitask therapy with use of elastic resistance elements, which the most important advantage is to generate a slight resistance in the initial phase of the movement increasing evenly in the subsequent phases of the exercise.

Due to these properties **Mini Tensor** is particularly useful in the post-traumatic, post-surgical, orthopedic and neurological rehabilitation. The device is also used in sports rehabilitation, rheumatology and geriatrics.

**Mini Tensor** is a powerful device with very small dimensions. It enables performing a lot of rehabilitation exercises, stretching and strengthening – affecting the general physical condition of the body.
