

MIRR 1 - Mirror

Product short description:

Mirror with posturographic net is designed to verify the correct posture of the patient. Mirror is equipped with a brake system chassis that provides full mobility of structure. It is used in hospital wards, clinics, nursing homes as well as in private surgeries and cosmetic rehabilitation practices. Grid is ‘carved’ into glass, which ensures its durability and resistance to abrasion. Mirror frame is made of steel to ensure high stability of the structure. The frame is powder coated to ensure high scratch durability to paint.
