SCH-1 - Rehabilitation stairs

Product short description:

Rehabilitation stairs are used in physiotherapy for learning and re-education of gait – one of the most important elements of the rehabilitation of patients with dysfunctions of the lower limbs. They are used primarily in rehabilitation departments, physiotherapy, neurology and orthopaedics.

The SCH-1 model is a elevating platform with two flights of stairs, each of a different length, and a platform. There are handrails on both sides of the stairs and on both sides of the platform. The handrails are adjustable in height and width according to the height of the patient with easy-to-use screws.
