

SCH-2 - Rehablitation stairs

Product short description:

Rehabilitation stairs are used in physiotherapy for learning and re-education of gait – one of the most important elements of the rehabilitation of patients with dysfunctions of the lower limbs. They are used primarily in rehabilitation departments, physiotherapy, neurology and orthopaedics.

The SCH-2 model is an elevated platform with one flight of stairs and one ramp. On both sides of stairs and ramp, as well as on two sides of platform there are handrails. Handrails are adjustable in height and width depending on the patient's height with simple-to-use screws.
